New isolated mycobacteria polypeptides and nucleic acids - used developing products for the diagnosis of or vaccination against mycobacterial infections, particularly tuberculosis. for

Claim 1; Page 151-152; 163pp; English.

The present sequence represents a Mycobacterium tuberculosis protein. Products from the present invention, which describes protein fragments and nucleic acid fragments derived from M.tuberculosis, can be used in the detection of and prevention of mycobacterial infections. In particular, the proteins and nucleic acids can be used for the diagnos of or vaccination against tuberculosis caused by M. tuberculosis, M. africanum or M. povis diagnosis

protective immune response against infections by mycobacteria belonging to the tuberculosis complex. The invention provides a (1) fusion to the tuberculosis complex. The invention provides a (1) fusion polypeptide fragment (1) and at least polypeptide comprising at least one fusion partner; (2) a fusion polypeptide fragment comprising a T-cel
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               tuberculosis; fusion polypeptide; pharmaceutical; vaccination; M. af CFP7B; CFP19; CFP27; CFP3OA; RD1-C

                                                                                                                                                                                                                                                                                                                                                         S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CC epitope from M. tuberculosis protein ESAT-6, or MPT59 and a second CC different amino acid sequence from M. tuberculosis, and/or including a CC sequence which protects the first amino acid sequence from in vivo CC degradation or post-translational processing; (3) a nucleic acid fragment CC that encodes the above polypeptides. The polypeptides and nucleic acid core useful as pharmaceuticals, for diagnosis of and as antigens for CC vaccination against TB caused by Mycobacterium tuberculosis, africanum or CC povis. The polypeptides are also useful for diagnosing ongoing or CC previous sensitization in an animal with bacteria belonging to the CC tuberculosis complex. The invention also describes the use of CFP7A or CC PT910A or a T-cell epitope of for the induction of a strong immune CC response in a mammal; use of CFP7B, CFP19 or MPT59-ESAT6 or a T-cell celipope of for diagnosis of TB in a mammal by performing a DTH type skin CC test; use of CFP27, CFP30A, CFP16, CFP19, CFP23, CFP23B, CFP7B or a T-cell epitope of for the preparation of an immunological composition; and CC for the preparation of a subunit vaccine

(I) is useful for preventing or treating the disease resulting from intracellular protozoan parasite infection such as malaria, tuberculosis, toxoplasmosis, trypanosomiasis, AIDS, cytomegalovirus infection, achlamydia disease, infections caused by Rickettsia, leishmaniasis, achlamydia disease, infections caused by Rickettsia, leishmaniasis, achlamydia disease, rippanosoma infections, Chagas disease, Japan encephalitis, Herpes virus (alpha) infections, or severe acute. respiratory syndrome. This sequence represent a protein used in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gene vaccine having nucleic acids encoding ubiquitin and antigen protein of intracellular parasite, useful for treating parasite infections such as malaria, tuberculosis, toxoplasmosis.
                                                                                                                                                                                                                                                                                                          Mycobacterium
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AAW18162
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                   CC A vaccinating agent for promoting an immune response in a mammal against CC Mycobacterium pathogens comprises at least one majorly abundant CC extracellular protein, i.e. the M.tuberculosis 110, 80, 71, 58, 45, 32A, CC 32B, 30, 24, 23.5, 23, 16, 14 or 12 kD proteins, or their analogues, CC homologues and subunits. The present sequence represents the 24 kD corotein. The vaccinating agents are used to protect against (or to treat CC existing) infections by Mycobacterium (especially M. tuberculosis) while CC the epitopes can also be used to detect presence of an immune response to CC a Mycobacterium pathogen. The vectors, containing the DNA for the cxisting that DNA molecules. More generally the DNA from other pathogens CC can be used in vaccines, e.g. against other bacteria, viruses, fungi and CC comboinant DNA molecules. More generally the DNA from other pathogens CC can be used in vaccines, e.g. against other bacteria, viruses, fungi and CC combositions can be produced. They generate a response CC effective compositions can be produced. They generate a response CC infection, regardless of the strength or specificity of the immune CC response. The vaccines are easy to produce and less toxic than known CC killed or attenuated vaccines, so can be given to immunocompromised CC subjects, e.g. those with HIV infection
                                                                                                                                                                                                                                                                                                                                                                         Matches

                                                                                                                                                                                                                                                                                 This represents a Mycobacterium tuberculosis 30 kD protein. The invention provides an agent for vaccinating mammals against Mycobacterium. The agent comprises at least one of the major abundant extracellular 110, 80, 71, 58, 45, 328, 328, 30, 24, 23.5, 23, 16, 14 or 12 kD proteins of M. tuberculosis, or at least 1 of their immunodominant epitopes and interleukin-12 (IL-12) or MF59 as adjuvants. The agent containing the nucleic acid encoding the extracellular products are used to raise a protective or therapeutic immune response against Mycobacterium, specifically M. tuberculosis. The immunodominant epitopes can also be used (typically in a cutaneous hypersensitivity test) to detect an immune response to vaccination. Preparation of the agent does not require selection of the most immunogenic products, so large scale production and purification are easy, resulting in a consistent, standardised formulation, having lower toxicity than killed or attenuated vaccines. The agents provide a rapid and effective response (including a strong cell-mediated component) and are safe even in immunocompromised subjects. They prevent development of an opsonising humoral response that might general intracellular pathogens
                                                                                                                                                                                         Matches 298;

                                                                                                                                                           The invention relates to a novel nucleic acid encoding an abundant extracellular protein of Mycobacterium tuberculosis useful as vaccines for generating protective or therapeutic immune response against viral, bacterial, fungal and protozoal infections. They are also used as immunotherapeutic agents. The present sequence is M. tuberculosis straiserdman extracellular protein

                                                                                                                                                                                                          A gene vaccine (I) comprises nucleic acid sequence encoding ubiquitin, and a nucleic acid sequence encoding the antigen protein of an intracellular parasite containing T-cell target sequence. (I) is useful for preventing or treating the disease resulting from intracellular protozoan parasite infection such as malaria, tuberculosis, toxoplasmosis, trypanosomiasis, AIDS, cytomegalovirus infection, achlamydia disease, infections caused by Rickettsia, leishmaniasis, achlamydia disease, infections caused by Rickettsia, leishmaniasis, achlamydia disease, Trypanosoma infections, Chagas disease, Japanes encephalitis, Herpes virus (alpha) infections, or severe acute poliomyelitis, Herpes virus (alpha) infections, or severe acute respiratory syndrome. This sequence represent a protein used in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gene vaccine having nucleic acids encoding ubiquitin and antigen protein of intracellular parasite, useful for treating parasite infections such as malaria, tuberculosis, toxoplasmosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  antimalarial; antitubercular; tuberculostatic; anti-HIV; antibacterial; haemostatic; protozoscide; antiinflammatory; neuroprotective; virucide; gene vaccine; ubiquitin; antigen; intracellular parasite; protozoan parasite infection; malaria; tuberculosis; toxoplasmosis; trypanosomiasis; AIDS; cytomegalovirus infection; achlamydia disease; Rickettsia; leishmaniasis; Ebola hemorrhagic fever; Trypanosoma; Rickettsia; laishmaniasis; Ebola hemorrhagic fever; Trypanosoma; Chagas disease; Japanese encephalitis; influenza; rubeola; dengue virus

The present invention relates to a vaccinating agent for promoting an immune response in a mammalian host against an infectious Mycobacterium pathogen. The vaccinating agent comprises at least a portion or at least one immunodominant epitope of at least one majorly abundant extracellular product selected from M. tuberculosis 110, 80, 71, 58, 45, 32A, 32B, 30, 24, 23.5, 23, 16, 14 or 12 XD protein and their analogs, homologs, and subunits, and an II-12 or MF 59 adjuvant. The compositions of the present

New vaccinating agent i Mycobacterium pathogen extracellular products

for promoting an immune response against infectious and HIV infection using majorly abundant from Mycobacterium tuberculosis.

                                                                                                                                                                                                                                                                                                                                               or more early Mycobacterium tuberculosis antigens. The invention furelates to: a kit for early detection of M. tuberculosis disease; are antigenic composition for early detection of the M. tuberculosis discor infection. The compositions of the invention have antibacterial activity. The method is useful for early detection of mycobacterial disease or infection in a subject and for preparing a vaccine against tuberculosis infection. This sequence represents a Mycobacterium tuberculosis MPT 51 protein of the invention.

AC for preparing a vacousequence represents invention comprises the amino acid sequence of Mycobacterium tuberculosis MPB51 protein. The preparing a vaccine against tuberculosis. The uence represents the Mycobacterium tuberculosis. d sequence of a C-terminal region of protein. The MPB51 peptide is useful culosis. The present amino acid tuberculosis MPB51 protein.

                                                                                                                                                                               of, or immunising a subject against Mycobacterium tuberculosis disease on infection. The composition of the invention contains a peptide from the M. tuberculosis GICB protein. The antigenic composition of the invention is useful for the early detection of, or immunising a subject against M. tuberculosis disease or infection. The present amino acid sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ঠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          닭
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         δ
The sequences given in AAB47555-57 show the protein subunits of the M. tuberculosis antigen 85 complex, Ag85A, Ag85B and Ag85C. Peptides of the invention derived from Ag85 can be recognized by a CD8 T-cell and may be used in the manufacture of agent for vaccinating prophylactically or therapeutically against infection by a mycobacterium by stimulating a CD8 T cell response. These peptides bind very strongly to HLA-B3501. Some of these peptides were able to induce cell mediated cytotoxicity using peptide-pulsed macrophages, and Ag85C(204-212) caused CD8 T cells to kill M. tuberculosis infected macrophages and induced intracellular IFN-gamma in activated CD8 cells. Ag85 derived polypeptides are useful for vaccinating a pre-selected host to stimulate a CD8 T cell response against a Mycobacterial infection. They are also useful for detecting in a population of T cells the presence or absence of CD8 T cells that recognize an epitope sequence, by contacting the population of cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Use of a polypeptide comprising CD8 T-cell groups derived from Mycobacterium tuberculosis antigen 85 in manufacture of a medicament vaccinating prophylactically or therapeutically against mycobacterial
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Ag85C.

Vaccine for boosting immunity to mycobacteria when administered life in a subject who has been vaccinated in childhood with Bac: Calmette-Guerrin, has purified proteins from mycobacterium tubes
                                                                                                                                                          tuberculosis.
                                                                                                                                                                ered in mid-
Bacillus

Claim 8; Page 17; 61pp; English

strain H37Rv gene Rv0125c product, designated FbpC2 Ag85C. This is one of 31 immunodominant secreted or cytosolic Mtb proteins of strain H37Rv (see AAM50729-59) discovered through the use of 2-dimensional liquid phase electrophoresis coupled with an in vitro interferon-gamma assay and liquid chromatography-mass spectrometry. The immunogens stimulate a strong interferon-gamma response from T cells of M. tuberculosis infected mice. The invention provides vaccine compositions for boosting immunity to mycobacteria when administered in mid-life to a subject who has been vaccinated neonatally or in early childhood with BCG and in whom protective immunity has waned. The vaccine compositions comprise 1 or more of the 31 purified immunogenic proteins. When used as immunogens, the secreted Mtb proteins lack the secreted signal sequence. A preferred protein is Ag85A (see AAM50759), the secreted product of the Rv3084v gene Sequence 340 present sequence ğ is that of the Mycobacterium tuberculosis (Mtb)
